TUM BLOCKCHAIN HACKATHON 2026 · CARDANO / MASUMI TRACK

Bargain Bot

Gets your suppliers bidding. Only gets paid when the deal holds up.

Built on CARDANO

THE PROBLEM

Up to 50%

of a hardware product's cost is parts

Small teams buy them by email: ask three suppliers,
take a quote, maybe push back once.

“

Bill of Materials sind bis zu 50% der Produktkosten … Den Überblick zu behalten und das Beste rauszuholen ist prädestiniert für eine gute KI-Lösung.

Clemens Saur, NeuroControls (Munich)

BOMs are up to 50% of product cost … predestined for a good AI solution.

Cold LinkedIn message, no prior connection. He replied in 6 minutes.

HOW IT WORKS

Three steps

1

Hire it like a colleague

Item, quantity, your limit, your deadline. Your limit stays secret.

2

It haggles like a pro buyer

Opens low, gives ground slowly, quotes rivals' offers, drops the expensive ones, then a final "beat the best price" round.

3

Ten checks before any deal

Price, quantity, delivery, must-haves, signed confirmation.

Simulated suppliers

ONE REAL RUN

2,000 stainless steel mounting brackets

Supplier A	€4.88
Supplier B	€5.09
Supplier C	€5.49

→

€4.31

€1,140 saved vs the best opening offer

10/10 checks passed

Prices come from your own quotes and from suppliers competing. Next: public market prices for every part.

TRUST

No valid deal, no fee.

✓ Good deal

All checks pass. We record the result on Cardano and can collect the fee.

✗ Bad deal

A supplier's total doesn't add up. No deal, nothing recorded, nothing collected.

BOOTH PROOF

Paid on Cardano Preprod, start to finish

07:53:23 · Fee locked block 5356156 `9ae47b91…`

07:54:03 · Result recorded, 40 s later block 5356157 `304720bc…`

08:37:53 · Payment collected, after the unlock time `c2d59bd3…`

WHERE PRICES COME FROM

Price data that exists, and what it costs

Your own quotes	What each supplier offers you today	Free · used now
Suppliers competing	Each offer is leverage on the next	Free · used now
Distributor APIs (Octopart/Nexar, DigiKey, Mouser)	Public list price per part, per quantity	Nexar: free for 100 parts · next
Enterprise cost data (S&P Global, Beroe)	What a part should cost	Quote-based · later

None of them sells the price a supplier will actually accept. Only negotiating finds that.

NEXT

What comes next

1. Real suppliers by email
2. Market prices for every part: one data subscription, shared by every customer where the licence allows
3. A share of what we save you

It negotiates, and proves its work before it collects a fee.
